

Compilers

Temporaries

- Idea: Keep temporaries in the AR
- The code generator must assign a^{fixed} location in the AR for each temporary

Temporaries

def fib(x) = if ¹x = ¹1 then 0 else
if ¹x = 2 then 1 else
fib(x - 1) + fib(x - 2)

2 temporaries

- Let NT(e) = # of temps needed to evaluate e
- NT(e₁ + e₂)
 - Needs at least as many temporaries as NT(e₁)
 - Needs at least as many temporaries as NT(e₂) + 1Max
- Space used for temporaries in e₁ can be reused for temporaries in e₂

$$NT(e_1 + e_2) = \max(\underline{NT(e_1)}, \underline{1 + NT(e_2)})$$

$$NT(e_1 - e_2) = \max(\underline{NT(e_1)}, \underline{1 + NT(e_2)})$$

$$NT(\text{if } e_1 = e_2 \text{ then } \underline{e_3} \text{ else } \underline{e_4}) = \max(\underline{NT(e_1)}, \underline{1 + NT(e_2)}), \underline{NT(e_3)}, \underline{NT(e_4)})$$

$$NT(\text{id}(\underline{e_1}, \dots, \underline{e_n})) = \max(\underline{NT(e_1)}, \dots, \underline{NT(e_n)})$$

$$\underline{NT(\text{int}) = 0}$$

$$\underline{NT(\text{id}) = 0}$$

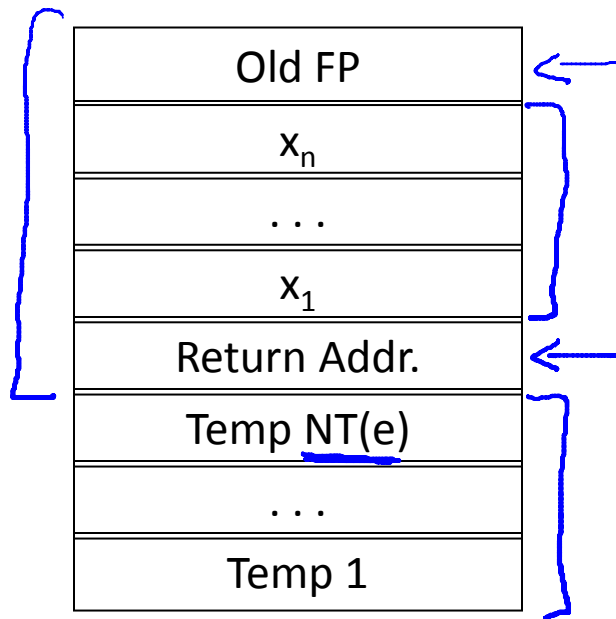

Temporaries

def fib(x) = if ⁰x = ¹1 then ⁰0 else

- For a function definition $f(x_1, \dots, x_n) = e$ the AR has 2 + $n + NT(e)$ elements
 - Return address
 - Frame pointer
 - n arguments
 - $NT(e)$ locations for intermediate results

Temporaries

For the `powerOfTwo()` function at right, what are the numbers of temporaries required to evaluate each sub-expression, and the total number of temporaries required for `powerOfTwo()`?

Temporaries

```
def powerOfTwo(x) =  
    if x % 2 == 0  
    then powerOfTwo(x / 2)  
    else x == 1
```

	<u><code>x % 2 == 0</code></u>	<u><code>powerOfTwo(x / 2)</code></u>	<u><code>x == 1</code></u>	<u>Total</u>
<input type="radio"/>	1	2	2	3
<input type="radio"/>	1	1	1	1
<input type="radio"/>	2	1	0	2
<input type="radio"/>	2	1	0	3

- Code generation must know how many temporaries are in use at each point
- Add a new argument to code generation
 - the position of the next available temporary
- The temporary area is used like a small, fixed-size stack

$\text{cgen}(e_1 + e_2) =$

$\text{cgen}(e_1)$

$\text{sw } \underline{\$a0} \text{ } \underline{0(\$sp)}$

$\underline{\text{addiu } \$sp \ \$sp \ -4}$

$\text{cgen}(e_2)$
